

## Corsair Force Series LS SSD firmware upgrade – S9FM02.0

**WARNING!!!** This firmware upgrade will format the drive and all of its contents will be erased. Please back-up your data by either performing full disk clone of the drive or making copies of critical personal files.

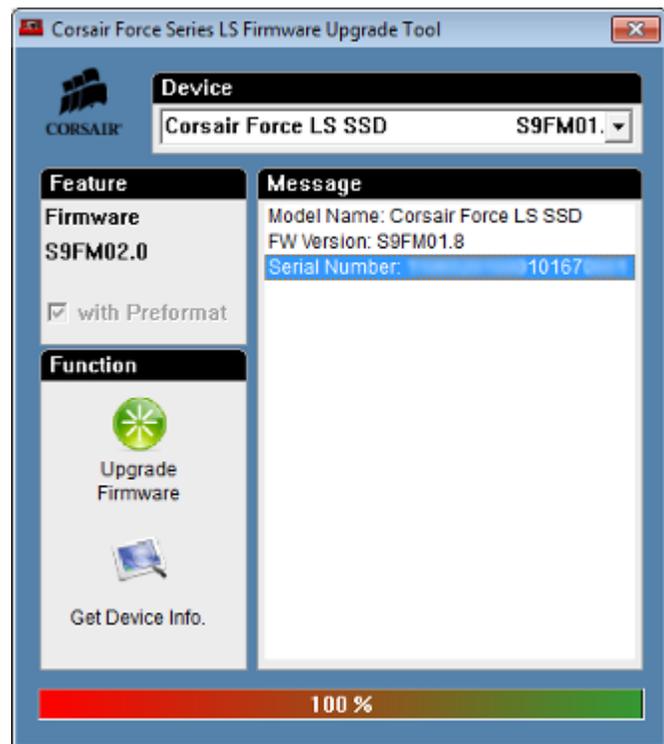

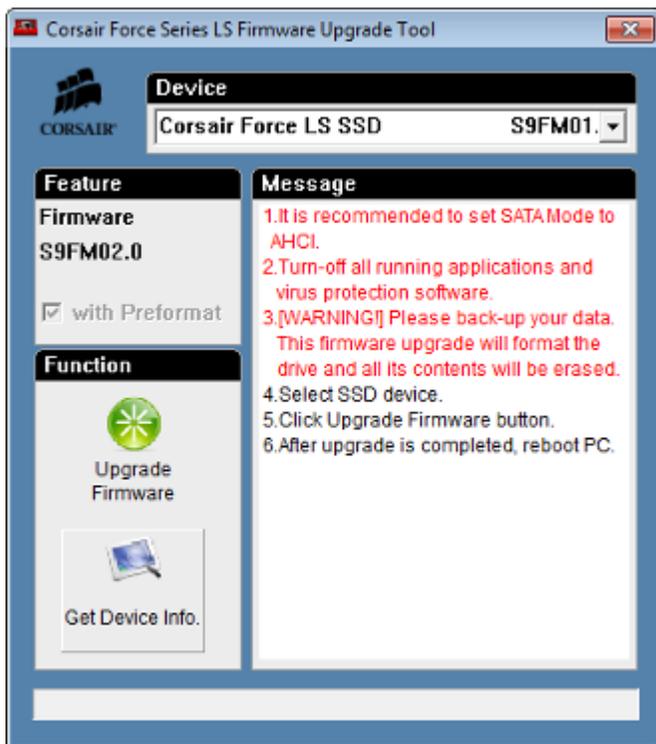

Product	Part numbers	Download Type	Version	Release Date
Corsair Force Series LS	CSSD-F60GBLS, CSSD-F120GBLS	Firmware	S9FM02.0	03/18/2015

To enhance stability and reliability of 60GB and 120GB variants of Force Series LS SSD, the latest firmware S9FM02.0 has been released. This update is **HIGHLY RECOMMENDED** for existing customers who own one of those products with the specific serial number sequence.

Steps to determine if Force LS drive requires an update, are outlined below:

1. Download and open Corsair Force Series LS Firmware Upgrade Tool\_S9FM02.0.
2. Click on “Get Device Info” button under Function section.
3. Under FW Version in Message section, verify that FW version is S9FM01.8, then proceed to step 4. (If S9FM02.0 is displayed there, this means the drive already has the latest firmware programmed and does not require an update. No further action is necessary).
4. Under Serial Number in Message section, please look for one of the following 5-digit serial number sequences:

xxxxxxxxxxx10167xxxx  
xxxxxxxxxxx10173xxxx  
xxxxxxxxxxx10249xxxx  
xxxxxxxxxxx10253xxxx

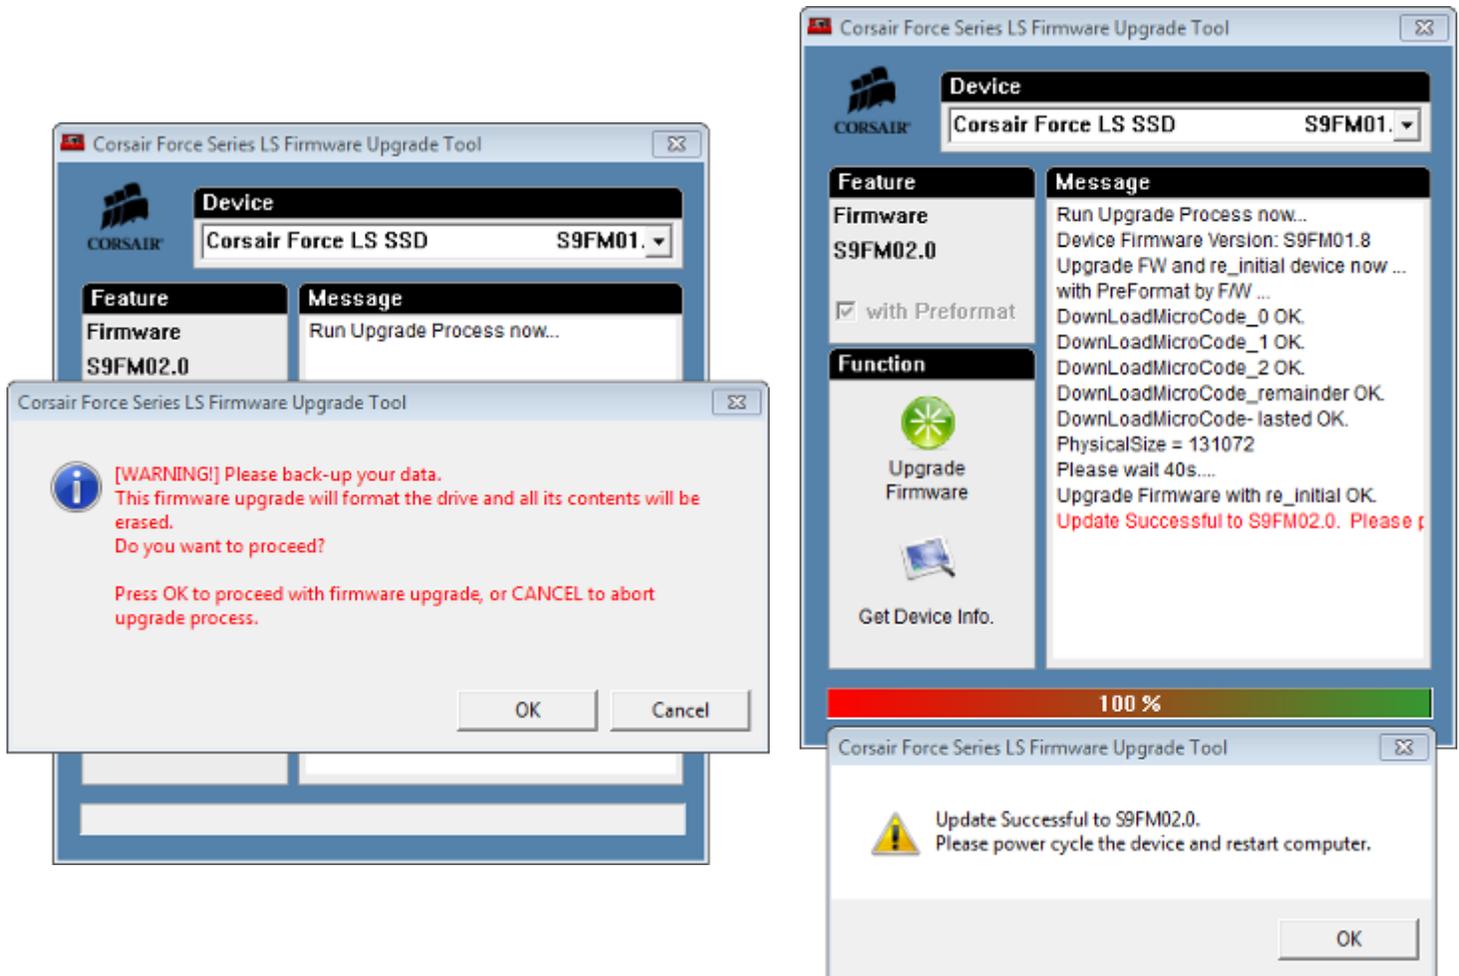

5. If 5-digit serial number sequence displayed in Message section matches one of the four predetermined for the upgrade, you may proceed to the next step.

## Corsair Force Series LS SSD firmware upgrade - S9FM02.0

**WARNING!!!** This firmware upgrade will format the drive and all of its contents will be erased. Please back-up your data by either performing full disk clone of the drive or making copies of critical personal files.

6. Close all running applications.
7. This firmware upgrade will format the drive and all of its contents will be erased. Please back-up your data by either performing full disk clone or making copies of critical personal files.  
(Corsair SSD Toolbox provides disk clone functionality for your convenience. It can be downloaded [HERE](#). Once the Corsair Toolbox is started, select Disk Clone and follow onscreen instructions).
8. Click on “Upgrade Firmware” button.
9. The **WARNING** message will appear – press OK to proceed with firmware upgrade or CANCEL to terminate upgrade process.
10. After OK button is pressed, firmware upgrade process will start. **DO NOT TURN OFF YOUR PC OR OTHERWISE INTERRUPT THIS PROCESS!**

11. Upgrade process should finish within 60 seconds. Upon completion, a message will appear requesting to restart the PC in order to power cycle the SSD.
12. The Force Series LS SSD is now upgraded to firmware SFFM02.0.
13. Thank you and enjoy using your Force Series LS SSD.
