# Hatchery to Growout Assist
Creating Tank Records

Step 1 Create a Tank Record

The Tank Screen allows you to create a Id for each tank that you have on the farm.

Tank
This field identifies the tank and should be the Tank Group then a seq no for example
if the Tank was in the Nursery Section then it should N-01 for the first in the group.
You should use a padded 0 in front of the number 1 to 9 so they appear in sequence
this is because the tank id is character type field.

Tank Group
This field identifies the tank group for example Nursery, Growout, Quarantine etc.

Order No in Tank Group

This field tells the Site Layout Report in what order is the tank is to be displayed the field only accepts a integer number.
