

Working with layers in advanced mode

The advanced mode

Open the configuration window.

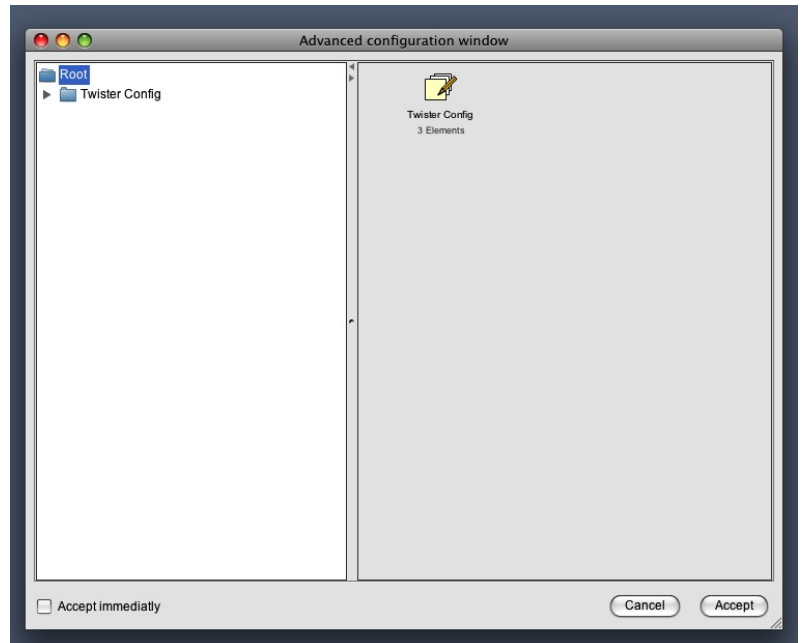

The advanced mode

Press the advanced config button to open the advanced configuration window.

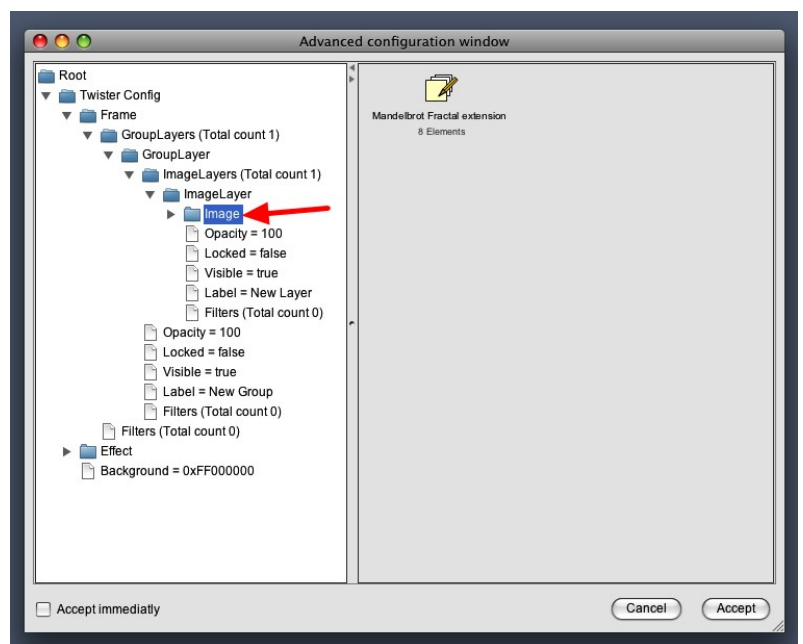

The advanced mode

In the advanced configuration window you can access to the parameters as in a file system tree.

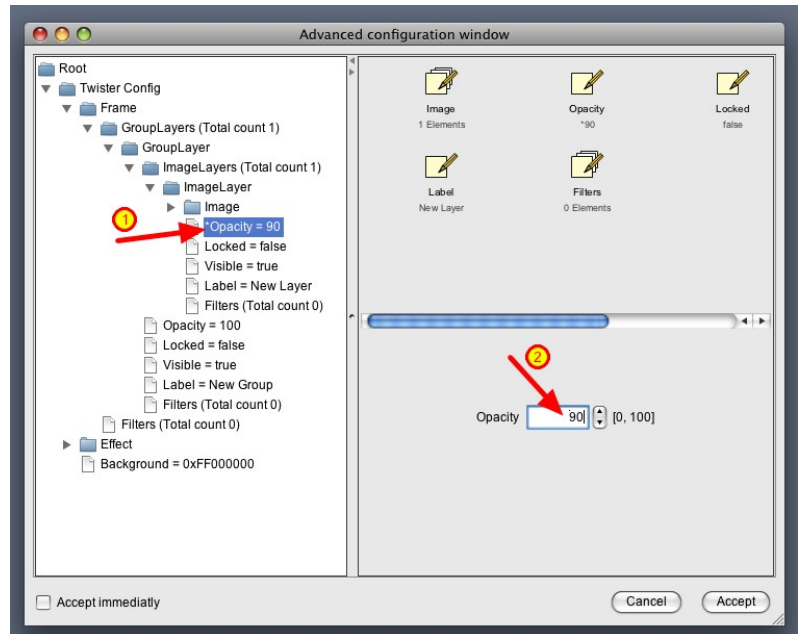

The advanced mode

Expand the tree and select the image node.

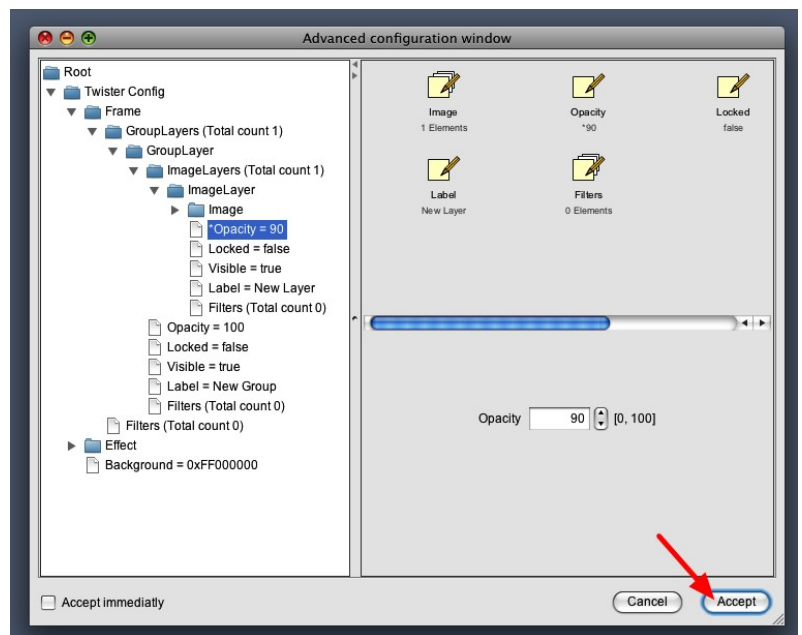

The advanced mode

Select the opacity node and change the opacity.

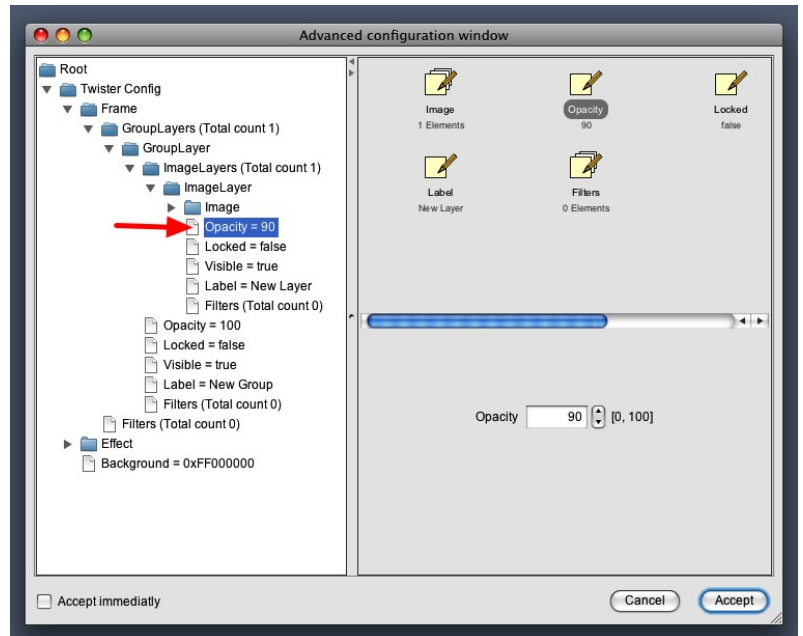

The advanced mode

Press accept button to apply the changes. You can apply many changes in the same time.

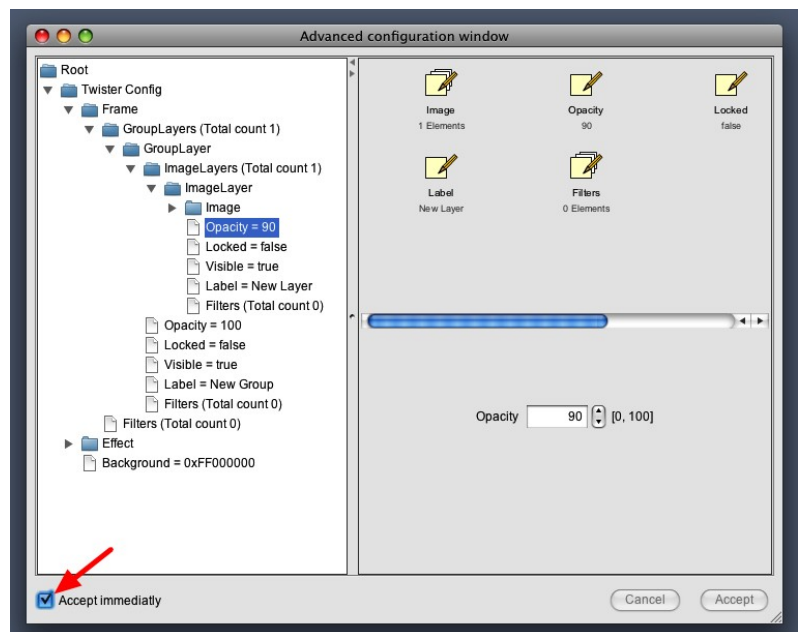

The advanced mode

The asterisk before opacity label disappear.

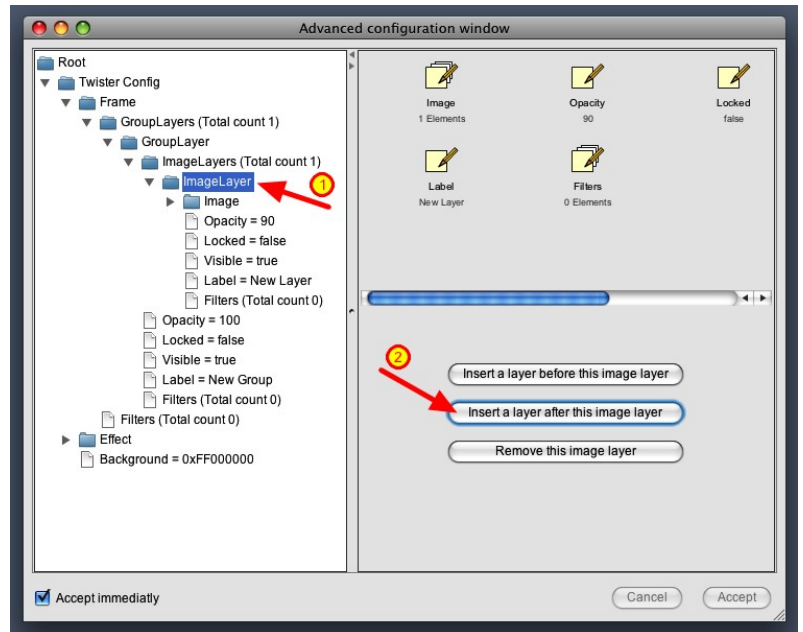

The advanced mode

Check the accept immediatly button. When accept immediatly is set, you don't need to press accept button to apply a change and you can't apply many changes in the same time.

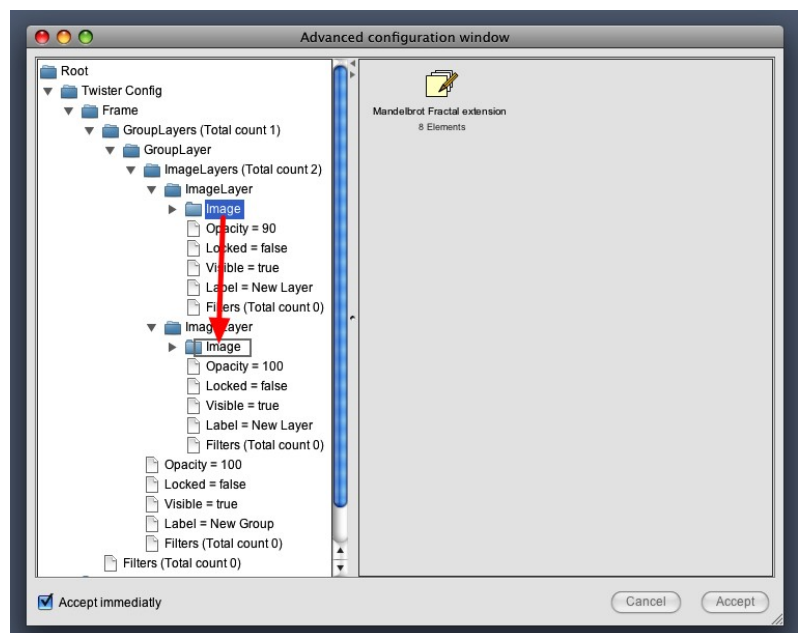

The advanced mode

Select the image layer node and press the insert a layer after button.

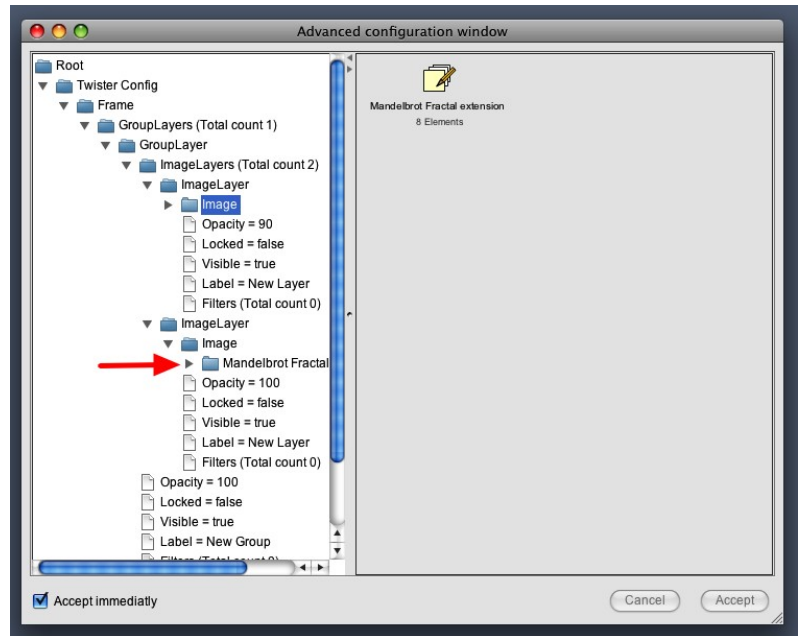

The advanced mode

Select the image node on the first image layer and drag & drop it on the image node of the second layer.

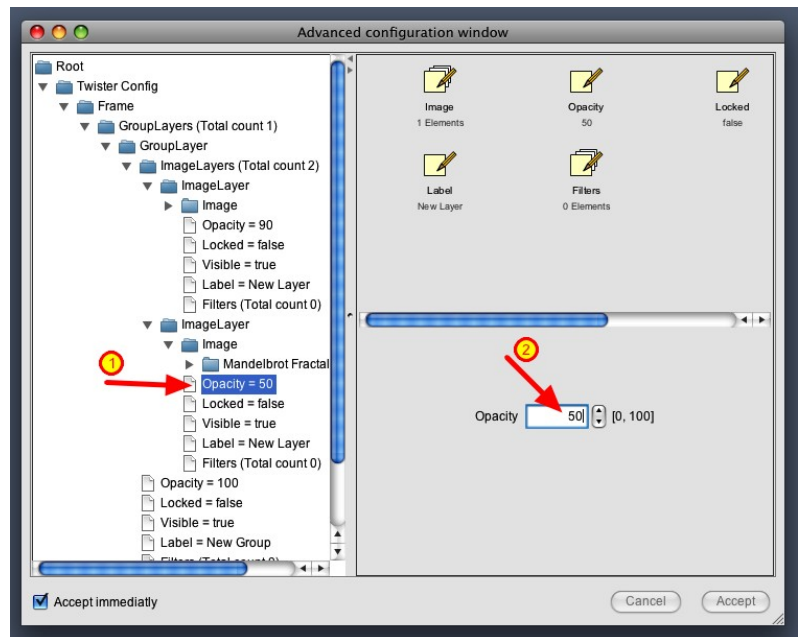

The advanced mode

The image on the first layer is copied on the second layer.

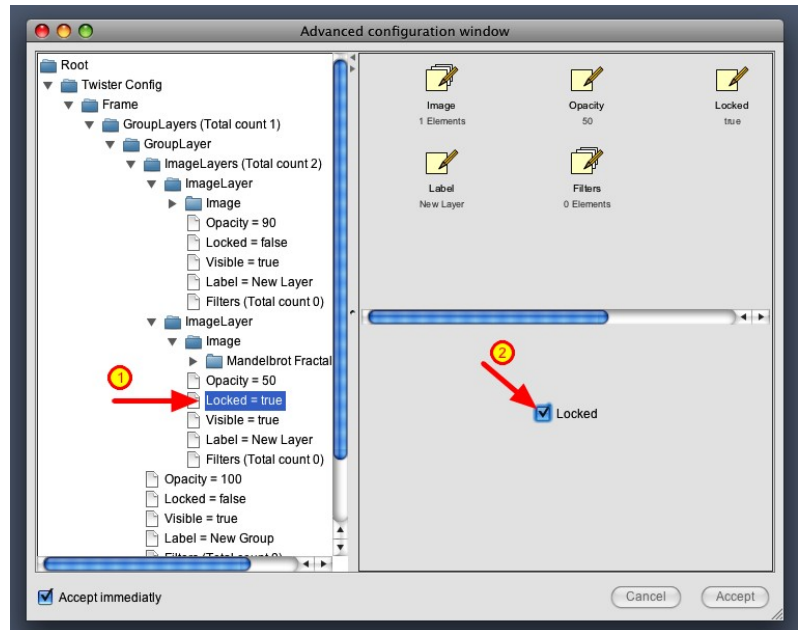

The advanced mode

Select the opacity node of the second layer and change the opacity.

The advanced mode

Select the locked node of the second layer and check it.

The advanced mode

Press left mouse button to zoom. Two layers are displayed in the visualization window.
