**Pricing:**

(Pricing subject to change without notice. Please consult the web site for the latest information.)

Single User . . . . .	\$99.95
5 Users . . . . .	\$449.78
10 Users . . . . .	\$719.64
25 Users . . . . .	\$1,619.19

**System Requirements:**

(System requirements are subject to change without notice. Please consult the web site for the latest information.)

- Macintosh OSX 10.7 - 10.9
- FileMaker® Pro 8 through 13
- Microsoft® Outlook for Mac 2011 (updated to the latest version)

The Outlook Manipulator for Mac plug-in allows FileMaker® Pro to exchange data with Microsoft® Outlook Contacts, Mail, Calendar, Tasks, and Notes within Exchange and IMAP e-mail accounts. By using this plug-in your users can become more efficient through the elimination of double entry. As information gets entered into your FileMaker database during the day your users' Outlook folders are updated. This allows the ability to synchronize all data with mobile devices such as iPhone, Droid, or Blackberry.

**E-mail:**

Use the plug-in to import and parse e-mails from Outlook into FileMaker. Once all e-mails are imported, you can have a complete archive of all e-mail correspondence directly in FileMaker allowing the entire company to view e-mail history between any customer and employee. You can also send HTML or plain text formatted e-mails with multiple attachments from FileMaker.

**Contacts:**

Centralize your entire company's contact list by using this powerful plug-in to pull Outlook contacts from each user into FileMaker. Once all your contacts are centralized in FileMaker, then you can push all records to Outlook allowing each user to easily update Outlook contacts.

**Calendars:**

Use the plug-in to push your FileMaker events into Outlook. Once the events are in Outlook you may sync your mobile device such as iPhone or Blackberry, allowing you to conveniently have all FileMaker data. Additionally, you can easily pull events from Outlook into FileMaker. The plug-in allows a bi-directional data exchange which gives the ability to create or update appointments either in FileMaker or Outlook.

**Tasks & Notes:**

Use the plug-in to perform a bi-directional data exchange and either push your tasks and notes from your FileMaker database into Outlook, or pull them from Outlook into FileMaker. Once all of your tasks and notes are in Outlook, then you can sync your mobile device allowing you to have all FileMaker data on the go.

**Additional Features:**

- Display Outlook records from the FileMaker interface
- Save e-mail messages to your desktop as .EML files
- Take advantage of Outlook pop-up reminders
