

Thank you for your interest in Sunday Business Systems software. Our goal is to provide simple and efficient quality management system software as an unbeatable value.

The demo download includes a compressed or zip file containing:

- a standard or 32-bit version of the database
- a 64 bit version of the database (for Microsoft Office 64bit users)
- a PowerPoint presentation showing features, benefits, set up, and use
- install instructions (this document)

## **Install Instructions**

### ***Introduction***

- To run the SBS Database, you will need Microsoft Access installed. Our products will run on Microsoft Access 2007, 2010, 2013, and 2016.
- If you do not have Microsoft Access installed, you may download and install the free runtime version of Access from the Microsoft website:  
<http://www.microsoft.com/en-us/download/details.aspx?id=10910>
- Once Microsoft Access is installed, unzip the database file included in the zip file and save it locally.
- Launch the database once it has been unzipped.
- Do not launch or open the database file from inside the zip file.

### ***Demo products***

- Each database is a demo product which allows the user to install and run the product 25 times.
- After the 25th time, the product must be purchased and a valid registration product Key will be provided. Once entered, this product key will activate the user license.
- In this way, a user may enter actual data in the demo version which will not be lost when the product is registered.
- To purchase the registered software, visit our website at [www.SundayBizSys.com](http://www.SundayBizSys.com)

### ***Other SBS products***

SBS offers other products as trial downloads. These products may be downloaded directly from the website. Once Microsoft Access is installed (or the free runtime version of Access is installed), no further installation is required to run these tools. Simply download the file, unzip it and save it locally (if necessary), and copy the file to the desired location on your hard drive. You may launch the file normally.

**Thank you for your interest in our products. Your feedback, including ideas to improve our products, is always welcome. Please provide any feedback to [feedback@SundayBizSys.com](mailto:feedback@SundayBizSys.com).**

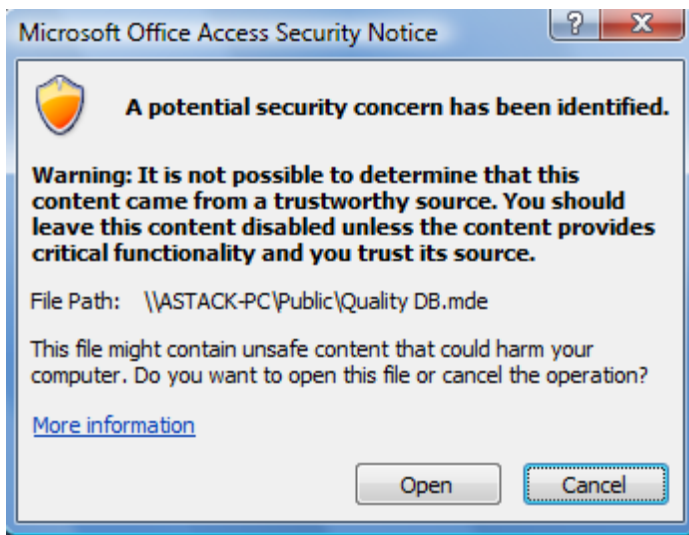

## Microsoft Security Considerations

SBS databases do not contain code intended to harm your computer. Every precaution is taken to ensure a safe product. The databases have been scanned for viruses using up to date virus detection.

You may see and access security notice when opening the file. This is a standard Microsoft warning despite the fact our databases are safe and do not present a risk.

or

In each case, SBS products are not malicious or intended to harm your computer. Click on the *Enable Content* or *Open* button.

Sunday Business Systems recommends saving the Database in a Trusted Location using Trusted Center. The Trust Center is a dialog box that provides a single location for setting and changing security settings for Access. You use the Trust Center to create or change trusted locations and to set security options for Access. Those settings affect how new and existing databases behave when they are opened in that instance of Access. The Trust Center also contains logic for evaluating the components in a database and for determining whether the database is safe to open or whether the Trust Center should disable the database and let you decide to enable it.

For general information about using the Trust Center, see the article [View my security and privacy settings in the Trust Center](#).
